

## Implementing Web Application

### Create IBM DB2 and Connection with Python

Date	18 September 2022
Team ID	PNT2022TMID30144
Project Name	Project - Customer Care Registry

#### Step 1 : Created IBM DB2 Services:

#### Step 2 : Import the ibm\_db python library :

**Pip install ibm\_db**

**Import ibm\_db**

#### Step 3 : Identity the database connection credentials

```
connecionstring="DATABASE=b1udb; HOSTNAME=9938aec0-8105-433e-8bf9-0fbb7e483086.c1ogj3sd0tgtu0lqde00.databases.appdomain.cloud; PORT=32459; SECURITY =SSL;UID=rmf92833; PWD=k1Hw5XHWgYzks5q1;"  
conn = ibm_db.connect(connecionstring,'','')
```

## Step 4 : Integrate IBM DB2 with python code:

```
app1.py 2 X
app1.py > signin
11 @app.route('/')
12 def home():
13     return render_template("home.html")
14
15 @app.route('/signin',methods=["POST","GET"])
16 def signin():
17     return render_template("signin.html")
18
19 @app.route('/addsignin',methods=['POST','GET'])
20 def addsignin():
21     if request.method == "POST":
22         email = request.form["email"]
23         cpass = request.form["cpass"]
24
25         sel_sql = "SELECT * FROM Sample WHERE EMAIL=?"
26         stmt = ibm_db.prepare(conn,sel_sql)
27         ibm_db.bind_param(stmt,1,email)
28         ibm_db.execute(stmt)
29         acc = ibm_db.fetch_assoc(stmt)
30         fname = ibm_db.result(stmt,'FNAME')
31
32         if acc:
33             if(str(cpass)) == str(acc['CPASS']).strip():
34                 return render_template("home.html",msg="Welcome",fname = fname)
35             else:
36                 return render_template("signin.html",msg="Invalid E-Mail or Password")
37         else:
38             return render_template("signup.html",msg="Not a Member First SignUp")
39
40
41 @app.route('/signup',methods=['POST','GET'])
42 def signup():
43     return render_template("signup.html")
```

## Step 5 : Close the Connection:

**ibm\_db.close(conn)**
